

UPDATE REGARDING CORONA VIRUS

03-04-2020

R-Mech Group (Mixtrum , MGE Produktion and MARS) takes the situation regarding Corona virus very seriously and does everything we can as a company, to protect our customers and employees from the outbreak.

During the current coronavirus situation, safety and welfare are on top of the chart regarding the employees, their families and local community. Our company is glad to report that no employees have been infected. The coronavirus has so far not had any material effect on ongoing operations/deliveries.

The company has stress tested:

- ✓ Supply chain - we bought critical supplies to ensure continuity of operations.
- ✓ Production - all plans are according to previous schedule, no delays. Production personnel must use all protective equipment and follow safety instructions.
- ✓ Office personnel - has retreated to remote work (from home) and are only allowed into the office with approval from their manager.

The company complies with all regulations and recommendations from local authorities in all locations, with strict sanitation regimes for all sites.

The company keeps close contact with its customers and suppliers to ensure new / revised needs for 2020/2021.

At the moment, we do not see any issues with upcoming deliveries.

Based on unstable forecasts from our customers, we temporarily need to adjust the lead-time on parts with surface treatment and parts with special material request. We will contact you regarding those parts during next week.

Feel free to contact us at any time if you have any questions

We will be available

Thanks for understanding
